

### What is SmartLabel?

SmartLabel™ is a low-cost, easy to use and fully integrated text placement software package that you can use to display or print high-quality maps from within MapInfo v.7.0 or above.

Labeling is flexible and custom parameters are configurable through an intuitive graphical user interface. The selectable placement capabilities are illustrated by descriptive pictograms to facilitate instant understanding.

**Fig. 1** – SmartLabel generates high-quality output based on user-defined rules. Please observe curved text, highways shields, and split placement for line features.

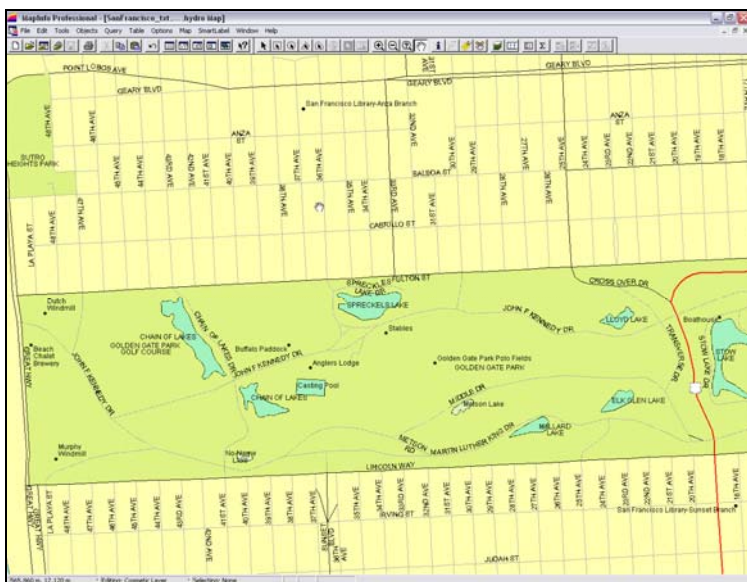

SmartLabel has two modes of operation:

1. **Dynamic labeling mode:** the system automatically re-labels the map as you pan or zoom, thereby optimizing the placement of labels in the current view.
2. **Static labeling mode:** by providing a scale or page size, the desired map area will be labeled.

### Labeling Capabilities

The most important capabilities of SmartLabel are:

1. **Line-feature text placement:** capabilities include placing labels above, below, or in the middle of the feature, cased (European-style) text placement, and stacking, spreading or repeating words.
2. **Point-feature text placement:** capabilities include nine selectable preferred positions of the text relative to the feature, allowing or disallowing labels to cross lines, or allowing or disallowing overlapping text.
3. **Area-feature text placement:** you can specify whether the text should be fully or partially inside the feature, placed horizontally or along the dominant angle of the polygon.

**Fig. 2** – SmartLabel ensures conflict-free label placement across all feature layers for line, area and point features.

These are just some of the capabilities that will be at your fingertips.
